Goal

Learn how to teach students to read like mathematicians.

- Know what makes reading in math different than reading in other subject areas
- Know what kind of information is important to pay attention to when reading a word problem
- Understand the flow and purpose of the 3-Reads Instructional Routine

Agenda

1. Framing
2. A few words on reading in Math
3. Experience the *Three-Reads* Instructional Routine
4. Unpack the *Three-Reads* Instructional Routine

A school bought some math books and 4 times as many science books. The cost of a math book was \$12 while a science book cost \$8. Altogether the school spent \$528. How many science books did the school buy?

$$4 \times 8 = 32$$

$$\begin{array}{r} 32 \overline{) 528} \\ \underline{32} \\ 808 \\ \underline{192} \\ 16 \end{array}$$

16 Science Books

$$\begin{array}{r} 32 \\ \times 16 \\ \hline 192 \\ 320 \\ \hline 512 \end{array}$$

Instructions:

1. Solve the textbook task.
2. Analyze the student work.
3. Talk with a partner about how the student was thinking.

Why is reading a math problem challenging for students?

pppst.com

I don't get it!

Read the Problem 3 Times

1st Read What is the problem about?

2nd Read What is the question?

3rd Read What information is important?

What information do mathematicians think important?

Quantities & Relationships

Students typically attend to number

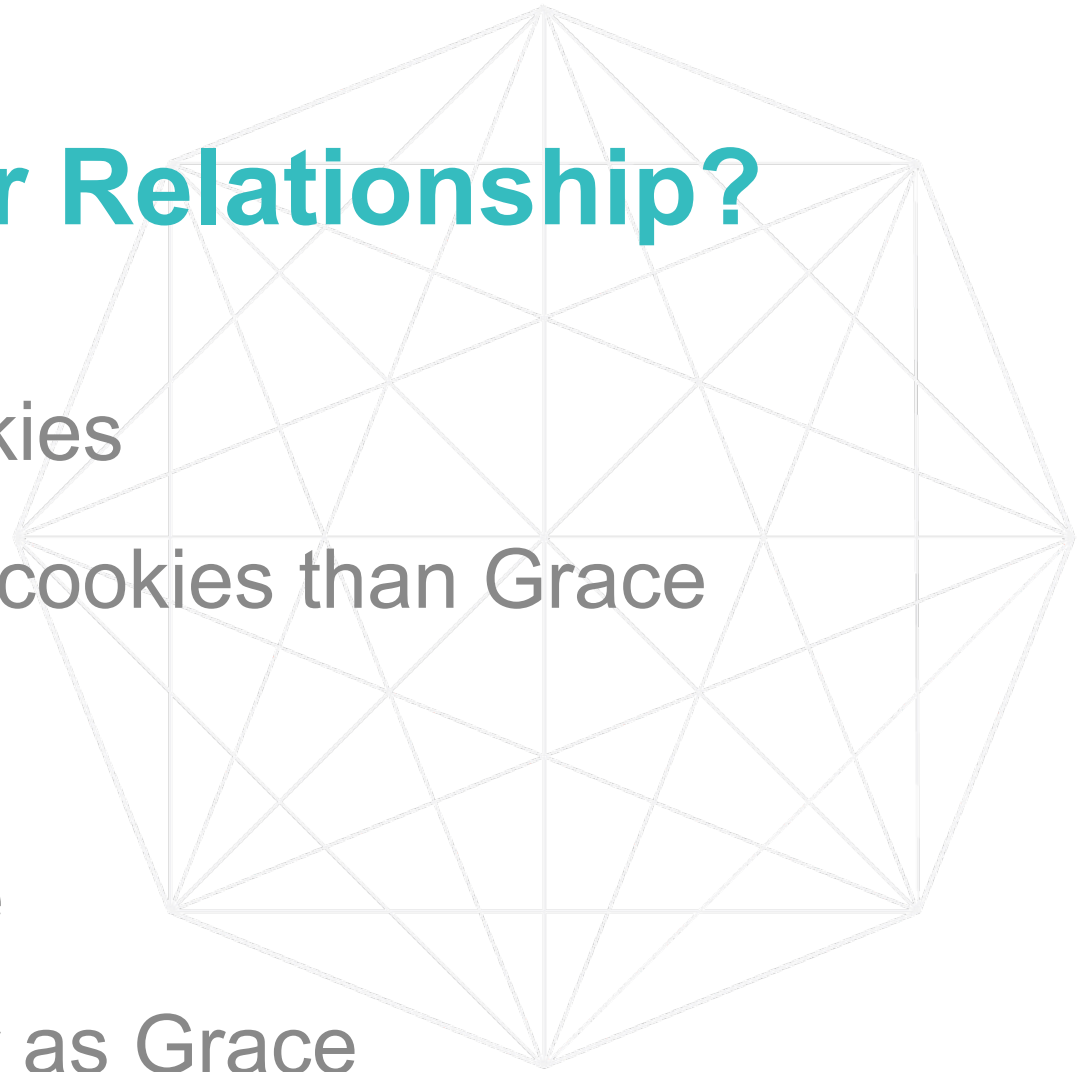

7

$\frac{1}{2}$

Does the number tell me something about a **quantity** or is it describing a **relationship**?

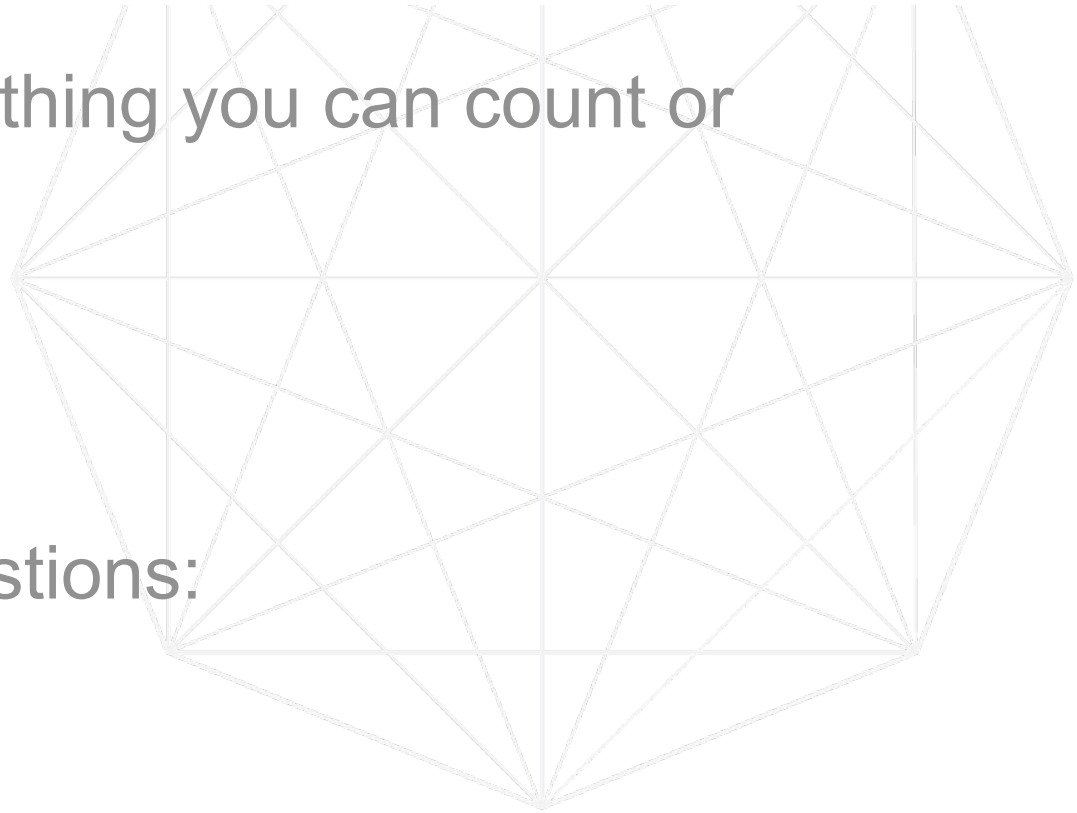

Quantity or Relationship?

- Grace has 7 cookies
- Amy has 7 more cookies than Grace
- Grace ran $\frac{1}{2}$ mile
- Amy ran $\frac{1}{2}$ as far as Grace

What's a Quantity?

- A Quantity is something you can count or measure
 - The number of...
 - The amount of...
- It answers the questions:
 - How many?
 - How much?

What's a Quantity?

A Quantity has three parts...

- Value (e.g. 7 or $\frac{1}{2}$ or 2π or X)
- Unit (e.g. cookies or miles)
- Sign (+ / -)

What are the Quantities in Gina's Garden?

Gina planted 24 flowers in her garden. Some of them were red and some of them were purple.

What can I count in this situation?

Finding Quantities in Gina's Garden

Gina planted 24 flowers in her garden. Some of them were red and some of them were purple.

The number of...

- The number of **red** flowers
- The number of **purple** flowers
- The **total** number of flowers
- The number of flowers that are neither red nor purple

Gina's Garden

Gina planted 24 flowers in her yard. Some of them were red and some of them were purple.

There were twice as many purple flowers as red flowers.

- Ask yourself: How are the quantities related?
- Think: Quantity  Quantity

Lesson Goal

Learn to “read like a mathematician”.
Pay attention to quantities in the
problem statement.

Read the Problem 3 Times

1st Read What is the problem about?

2nd Read What is the question?

3rd Read What information is important?

1st Read

What is the
problem
about?

CREATE A PICTURE IN YOUR MIND

2nd Read

What's the question?

What's the Question?

Rick keeps his trading cards in a box. Rick's uncle gave him 6 packs of 8 trading cards to add to his box. Rick found that 29 of the trading cards from his uncle were different than any of the cards he already had in the box. The rest of the trading cards from his uncle were the same as those he already had. How many of the trading cards from his uncle were the same as those Rick already had in his box?

State the question in your own words.

What quantity am I trying to find?

3rd Read

What's the
important
information?

What's the Important Information?

Rick keeps his trading cards in a box. Rick's uncle gave him 6 packs of 8 trading cards to add to his box. Rick found that 29 of the trading cards from his uncle were different than any of the cards he already had in the box. The rest of the trading cards from his uncle were the same as those he already had. How many of the trading cards from his uncle were the same as those Rick already had in his box?

What are the important quantities?

The number of...

Student A

Rick keeps his trading cards in a box. Rick's uncle gave him 6 packs of 8 trading cards to add to his box. Rick found that 29 of the trading cards from his uncle were different than any of the cards he already had in the box. The rest of the trading cards from his uncle were the same as those he already had. How many of the trading cards from his uncle were the same as those Rick already had in his box?

$$6 \times 8 = 48$$

$$\begin{array}{r} 1 \\ 48 \\ + 29 \\ \hline 77 \end{array}$$

Rick keeps his trading cards in a box. Rick's uncle gave him 6 packs of 8 trading cards to add to his box. Rick found that 29 of the trading cards from his uncle were different than any of the cards he already had in the box. The rest of the trading cards from his uncle were the same as those he already had. How many of the trading cards from his uncle were the same as those Rick already had in his box?

$$\begin{array}{r} 6 \\ 8 \\ + 29 \\ \hline 33 \end{array}$$

3 Reads Instructional Routine

Take Two

Lesson Goal

Learn to “read like a mathematician”.
Pay attention to quantities in the
problem statement.

Read the Problem 3 Times

1st Read What is the problem about?

2nd Read What is the question?

3rd Read What information is important?

1st Read

What is the
problem
about?

CREATE A PICTURE IN YOUR MIND

2nd Read

What's the question?

What's the Question?

Alicia, Emma, and Nick dive into an extremely deep pool.

Alicia dives to a depth of $-\frac{9}{4}$ meters from the surface of the pool. Emma's depth is twice as far from the surface as Alicia's dive.

Nick's depth is $\frac{2}{3}$ the depth of Alicia's dive.

**State the question
in your own words.**

What quantity
am I trying to
find?

3rd Read

What's the important information?

What's the Important Information?

Alicia, Emma, and Nick dive into an extremely deep pool. Alicia dives to a depth of $-9/4$ meters from the surface of the pool. Emma's depth is twice as far from the surface as Alicia's dive. Nick's depth is $2/3$ the depth of Alicia's dive.

What are the important quantities?

The number of...

Structure of the 3 Reads Routine

Reading Goal: Read Like a Mathematician

1

Launch the Three Reads Routine:
Introduce reading goal, review routine's steps

2

First Read:
Understand
the Context

Individual
Think Time

Share:
Discuss and Annotate

3

Second Read:
Interpret
the Question

Individual
Think Time

Pairs

Share:
Discuss and Record

4

Third Read:
Identify Important
Information

Pairs

Share:
Discuss and Annotate

Figure 6.6

Next Steps

- REPRESENT the SITUATION
 - Model with manipulatives
 - Represent the problem visually
 - Write a number sentence
 - Write an algebraic expression or equation
- SOLVE the PROBLEM
- REFLECT on reading like a mathematician
