# Shape Attributes

For the teacher:
1. Choose the representation that your students will create. You may need to tweak the PowerPoints depending on which representation you omit. (We suggest omitting the 'three squares')
2. Chart the remaining 5 representations so that they can be displayed simultaneously with the PowerPoint slides. Label the descriptions 1, 2 &3, and label the shapes 1, 2, 3.
3. The task set is designed to raise mathematical ideas related to orientation of shape, regular vs non regular shapes, and number of shapes vs number of sides on a shape.

Six Rectangles

Four Hexagons

(Three Squares)
